Leasing / Financing Options Available

The SSD-1 (patent pending), is an optional accessory that allows the PD-5 to sanitize solid state media such as SSD, Flash, Compact Flash, USB drives and controller boards for hybrid HDD's. The SSD-1 simply slides into the PD-5 and the solid state media is then inserted between the two crushing plates. Once the destruction cycle is initiated, over 90 pins pierce the solid state media from top and bottom causing both perforation and waffling which destroy the individual memory chips.

SPECIFICATIONS	SSD-1
Dimensions	0.5" H, 3" W, 5" L
Overall Dimensions	2.75" H, 5" W, 6.35" L
