### Leasing / Financing Options Available

The PD-4 physically destroys hard drives by bending, breaking, and mangling the hard drive and its internal components—including the data platters. Using a rugged stainless-steel crushing wedge, the PD-4 bends the data platters preventing the hard drive from “spinning up” or for the hard disk platters from being removed and placed on a spin stand used in laboratory data recovery techniques. The PD-4 also cracks the hard-drive housing, breaks the PC board, and smashes the read-write heads. Best for use after degaussing, the PD-4 ensures total hard drive destruction. SSD The SSD-1 (patent pending), is an optional accessory that allows the PD-5 to sanitize solid state media such as SSD, Flash, Compact Flash, USB drives and controller boards for hybrid HDD’s. The SSD-1 simply slides into the PD-5 and the solid state media is then inserted between the two crushing plates. Once the destruction cycle is initiated, over 90 pins pierce the solid state media from top and bottom causing both perforation and waffling which destroy the individual memory chips.

SPECIFICATIONS	PD-4
Power Supply	100~130VAC ±5%, 50/60 Hz
Power Consumption	During standby: 24W During crush: 1920W
Crush Time	Destroys up to 240 standard hard drives per hour
Destruction Capacity	One full height 1.66 inch hard drive Two standard 1 inch hard drives
Operating Environment	41°F – 104°F (5°C – 40°C), Humidity: 10 to 40% (non-condensing)
Weight	73 lbs.
Size	PD-4: 16.9 in. (L) x 7.2 in. (W) x 14.2 in. (H) 359.9mm (L) x 182.1mm (W) x 359.9mm (H)
Notes	Hard Drives are not reusable after having been destroyed.
